

A two-stage model to reveal a university's research data landscape and faculty's research data practices

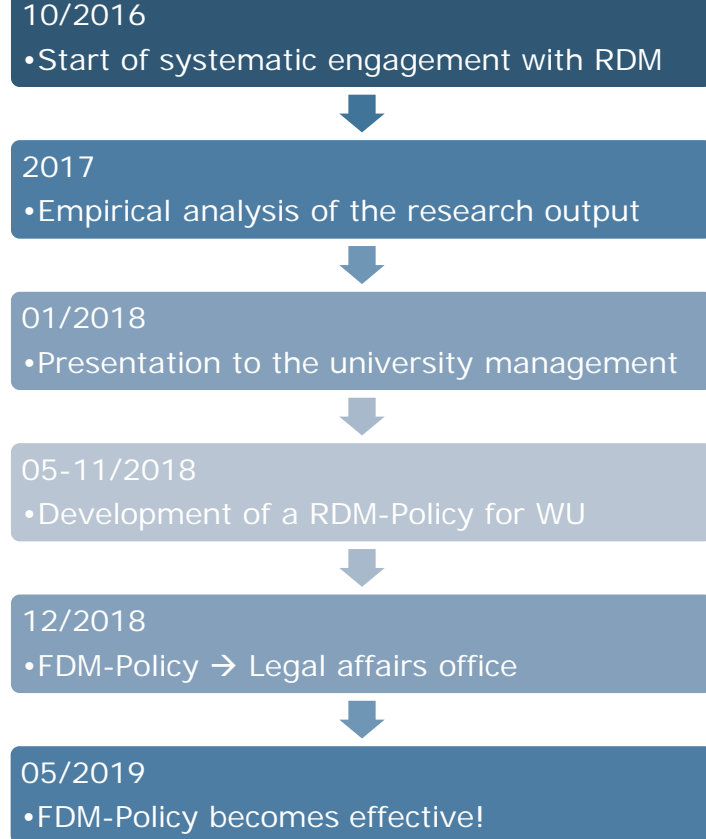

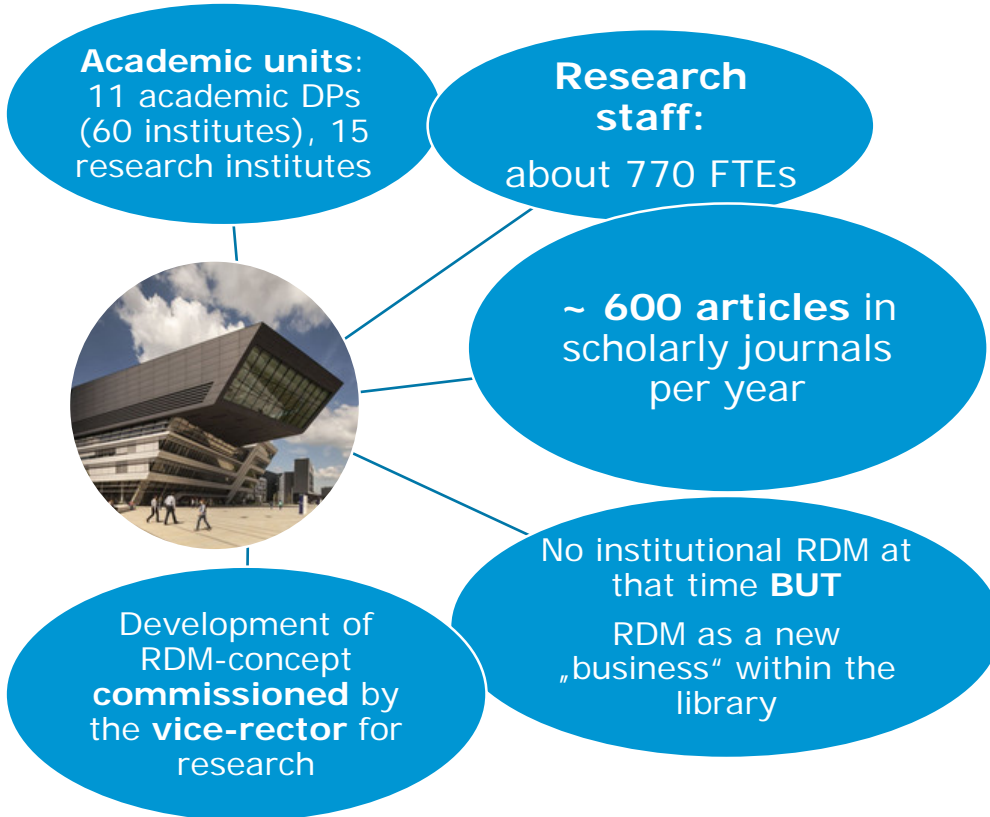

Thomas Seyffertitz & Michael Katzmayr

INTERNATIONAL CONFERENCE ON ECONOMICS AND BUSINESS
INFORMATION, BERLIN, 6-7 MAY 2019

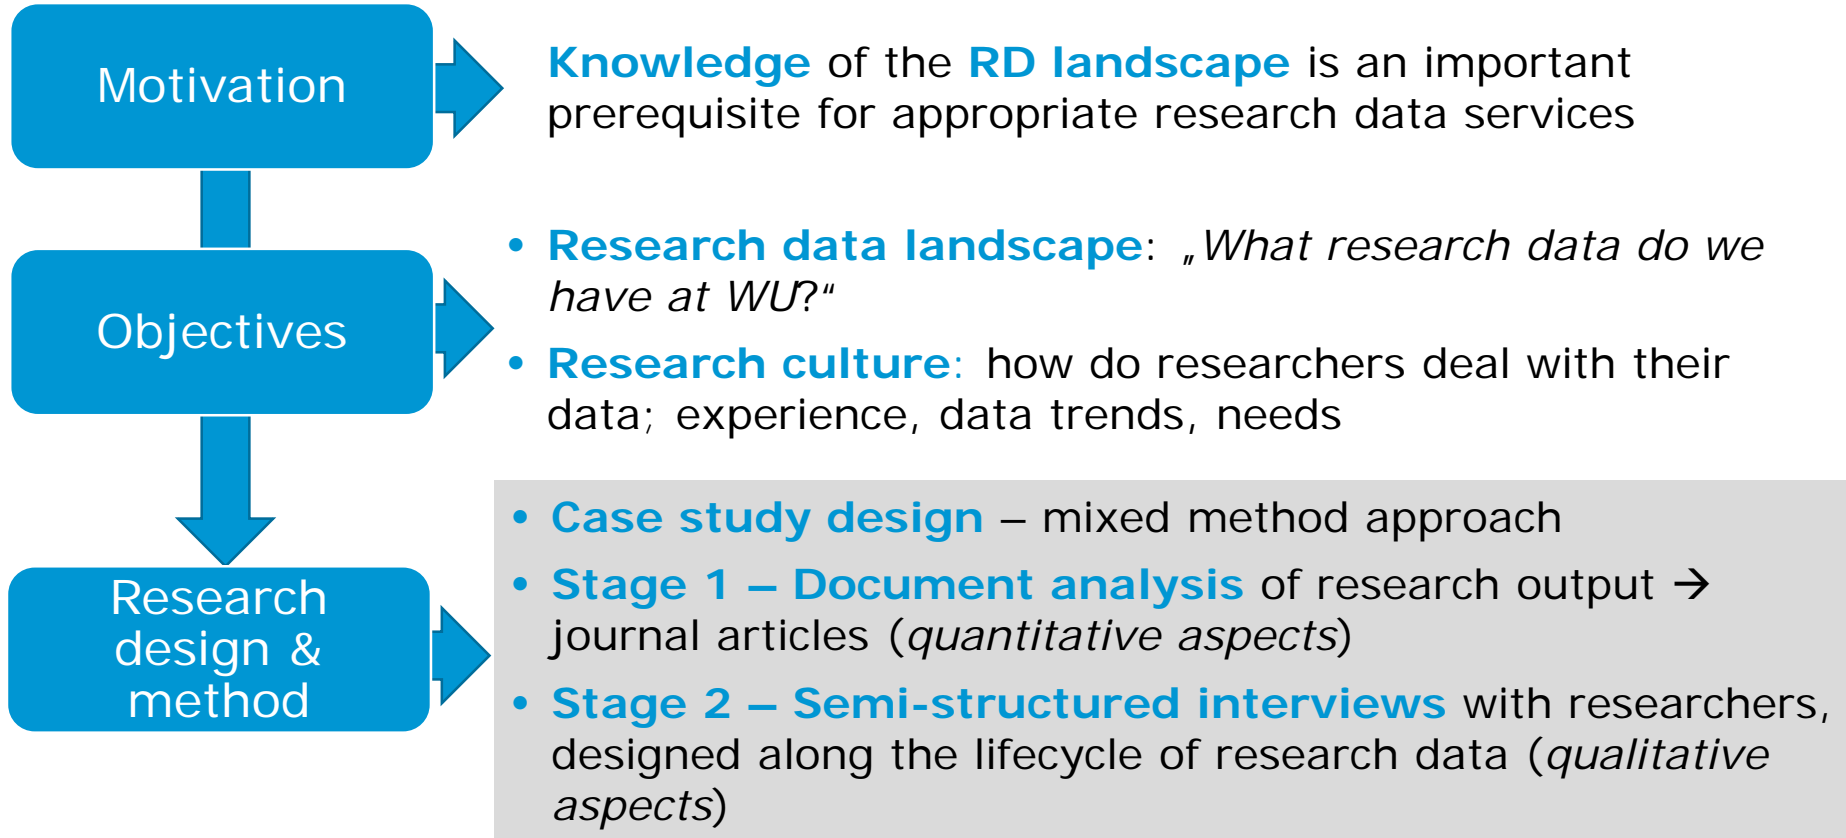

Vienna University of Economics and Business

Characteristics & Timeline

Motivation, Objectives & Research Design

Stage 1 – Document Analysis

Analysis of Journal Articles

...the paper is available through the Journal of Business Finance & Accounting (JBF&A) website. The authors are grateful to the anonymous referees for their constructive comments and suggestions. The authors are also grateful to the editor-in-chief, Professor Dr. G. S. Rammerstorfer, for his kind invitation to submit the paper to the Journal of Business Finance & Accounting. The authors are also grateful to the editor-in-chief, Professor Dr. G. S. Rammerstorfer, for his kind invitation to submit the paper to the Journal of Business Finance & Accounting. The authors are also grateful to the editor-in-chief, Professor Dr. G. S. Rammerstorfer, for his kind invitation to submit the paper to the Journal of Business Finance & Accounting.

Mathematical Model Simulation, VCL

Abstract
This paper studies the use of generative models to generate synthetic data for statistical analysis. The paper considers the use of generative models to generate synthetic data for statistical analysis. The paper considers the use of generative models to generate synthetic data for statistical analysis. The paper considers the use of generative models to generate synthetic data for statistical analysis.

Stage 2 – Semi-structured Interviews

Rationale & Methodological Aspects

- Expert interviews can be very **effective**
- **Awareness** of certain topics can be increased among the interview partners
- Objective: **exploring** expert knowledge (in terms of technical and process knowledge)
- **Sample building criteria**
 - Experience with data driven research
 - Covering all departments
 - Junior- and senior-researchers included
- **Interview/Topic-guide**: designed along the researcher's day-to-day research work and lifecycle of research data
- **Pre-test & 25 interviews**

Results – Analysis of the Journal Articles

General

Attributes	WU-level		SoWI-level	
	abs.	rel.	abs.	rel.
Research data	250	41,95%	247	57,18%
No research data	346	58,05%	185	42,82%
Total	596	100,00%	432	100,00%
Funder	126	21,14%	110	25,46%
No funding	470	78,86%	322	74,54%
Total	596	100,00%	432	100,00%
Data form	WU-level		SoWi-level	
	abs.	rel.	abs.	rel.
Quantitative RD only	141	56,40%	139	56,28%
Qualitative RD only	35	14,00%	34	13,77%
Both forms	74	29,60%	74	29,96%
Total	250	100,00%	247	100,00%

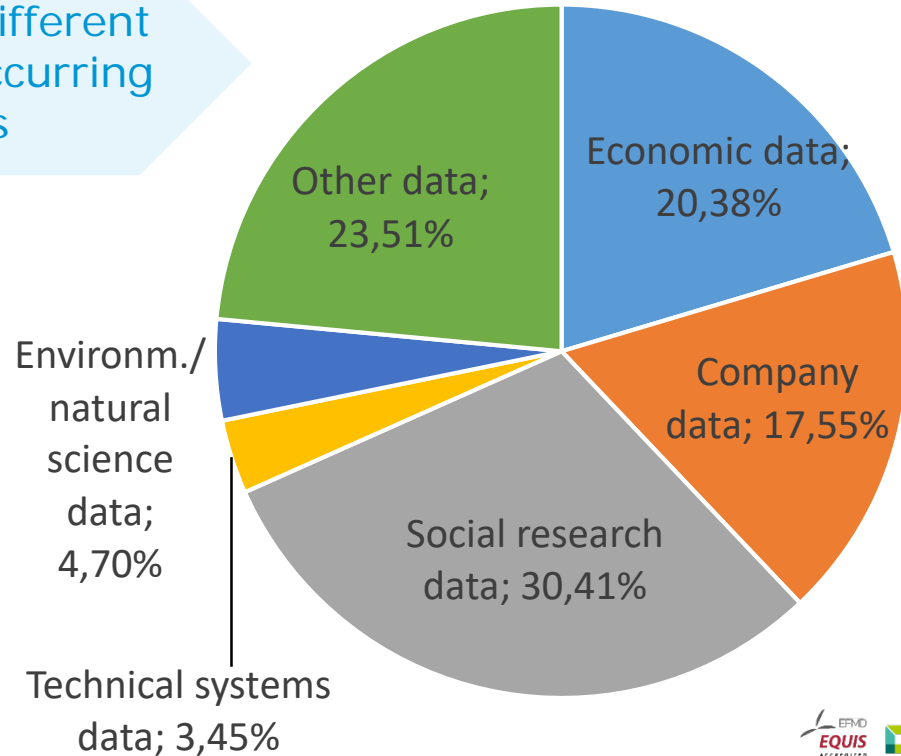

- Analysed 596 articles published in 2016
- ~80% without external/third-party funding
- Only 12% funding of papers without RD
- Whereas >33% of articles containing RD received funding
- 86% quantitative RD
- Almost 30% contained both quantitative and qualitative RD

Results – Analysis of the Journal Articles

What the data are about

Percentage of different types of data occurring in articles

Types of data	WU
Economic data	65
Company data	56
Social research data	97
Technical systems data	11
Environmental and natural science data	15
Other	75
Total frequency over all articles with RD (n=250, WU)	319

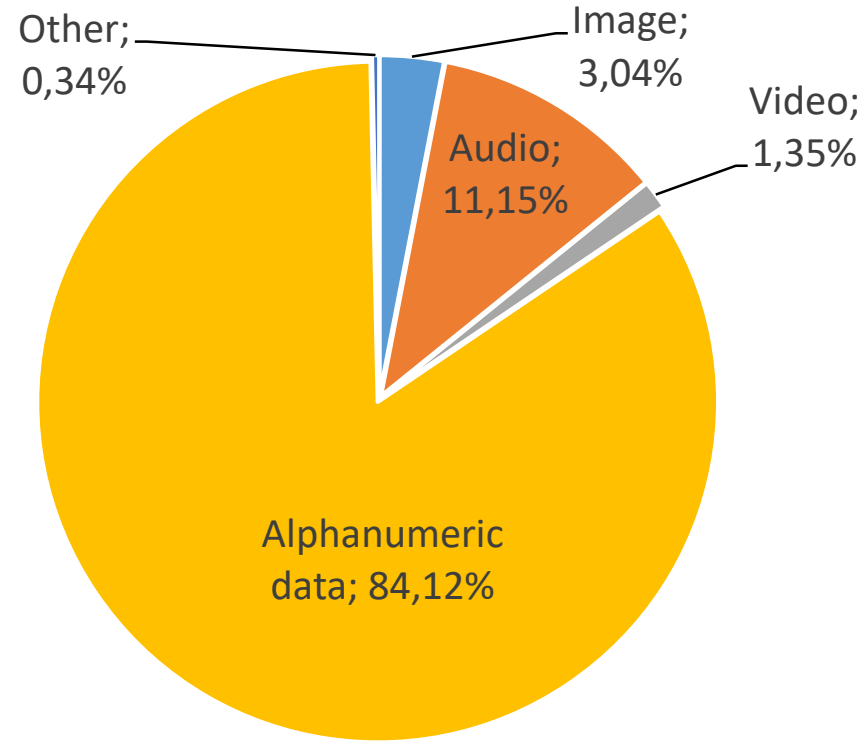

Results - Analysis of Journal Articles

Data Format Types

Percentage of data format types occurring in articles

Data format types	WU (abs.)
Image	9
Audio	33
Video	4
Alphanumeric data	249
Other	1
Total frequency over all articles with RD (n=250)	296

Analysing the Interviews

Following Meuser and Nagel (1991, 2009)

– Transcription

- **Paraphrase** - sequencing of the text according to thematic units
- **Coding** – ordering paraphrased passages thematically along our topic-guide

Analysis of a
single
interview

- **Thematic comparison** – grouping comparable passages from interviews
- **Conceptualization** - generalizing restricted to the empirical data

Analysis
across
multiple
interviews

– Theoretical generalization

Condensing

Semi-structured Interviews - Findings

DMP, research funders

- Some experience existing with funder mandates
- DMPs have been used for projects funded by *DFG*, *ERC*, *ESRC* and *Horizon 2020*

Data trends and developments

- Quantitative research methods: Big Data
- Source: increasingly WWW, Social media
- Storage; computer performance

Managing RD within the research process

- Data are scattered, data management strategy within departments rather an exception
- Use of external cloud-systems

RD in the publication process

- Quantitative RD: Publishers' data-policies relevant
- Qualitative RD: data usually not published; no policies (e.g. sociology)

Semi-structured Interviews – Findings ctd.

Archiving RD

- In a pragmatic and case-based way
- effort required for the accurate description of RD

Data loss

- Respondents have already experienced data loss
- Related to processed RD

Sharing & Reuse

- Most regard reuse as relevant (reproducibility)
- Sometimes data „used up“; dependent on discipline

Research data- Policy

- Different (discipline-specific) cultures
- Some fear over-regulation

RDM as a service

- Awareness-raising measures, one-stop shop
- Need for advice; information & technical services

Recommendations Based on Our Findings

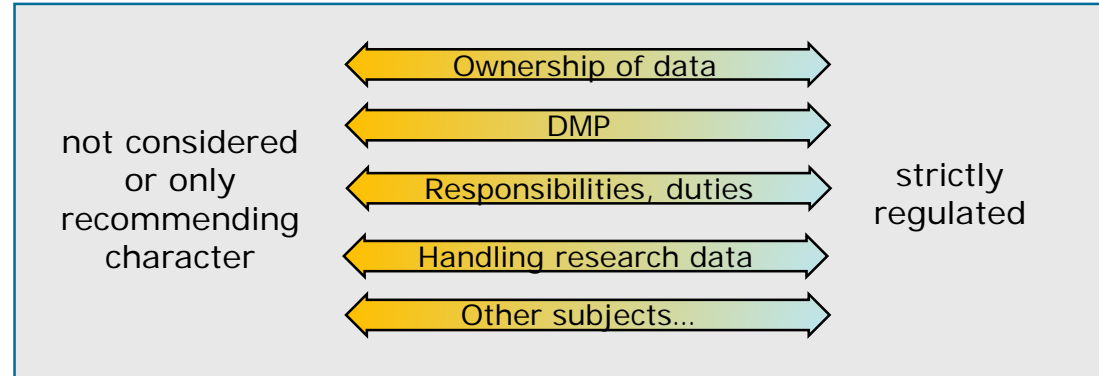

- 1. Developing a RDM-Policy:** awareness, research cultures; optional implementation at department level
- 2. Online material at the university's website** summarizing relevant information
- 3. Single point of contact:** providing information on RDM-services, referring to other sources etc...

Developing a RDM-Policy for WU

Several Important Aspects

Organisational and content-related issues

- *Single policy* for the entire university or *framework* with optional *customization* at the academic department
- Recommending or more regulating character

Basic orientation when developing a first draft

- Based on [state-of-the-art examples](#)
- Taking into account [empirical findings](#) and the [research cultures](#) at WU
- Middle ground between [directive specifications](#) and [non-binding recommendations](#)
- The draft defines an [ethical standard in dealing with research data](#) and is therefore deliberately designed as a policy and not as guideline

Methodology

- Bogner A., Menz W (2009): The Theory-Generating Expert Interview. Epistemological Interest, Forms of Knowledge, Interaction. In: A. Bogner, B. Littig and W. Menz (eds.): *Interviewing Experts*. London [UK], Palgrave Macmillan, pp. 43–80.
- Meuser M., Nagel U. (2009): The Expert Interview and Changes in Knowledge Production. In: A. Bogner, B. Littig and W. Menz (eds.): *Interviewing Experts*. London [UK], Palgrave Macmillan, pp. 17–42.
